

JOHN ENGLANDER

A Clear Voice on Sea Level Rise
Risks and Solutions

Sample Presentation Topics:

Speaker - Author - Futurist - Consultant

The seas are rising. The shoreline is shifting. How will communities and businesses be affected?

John Englander's unique ability to demystify the science and provide insight into the coming societal changes has broad appeal and resonates with community and business leaders in both the public and private sectors. Avoiding doomsday scenarios, he highlights the enormous economic opportunities that will allow us to not only survive but thrive if we begin to plan and adapt now to living in a world with ever-rising seas.

John will entertain, educate and inspire your audience with anecdotes about standing on the edge of melting glaciers in Greenland, to humorous encounters with polar bears in the High Arctic, to inspirational recollections of private discussions with Jacques Cousteau.

John Englander's engaging presentations clearly explain sea level rise without bias and technical jargon, allowing any audience to easily "connect the dots" on the latest science, the impending impacts and the potential solutions.

Unparalleled Expertise... John is an oceanographer and sea level rise authority. His broad marine science background coupled with explorations in Greenland and Antarctica and degrees in geology and economics allows him to see the big picture on the large-scale financial and societal impacts of sea level rise.

He brings the diverse points of view of an industry scientist, entrepreneur and executive, having served as CEO for such noteworthy organizations as The Cousteau Society and The International Seakeepers Society. As Founder of the Rising Seas Group he works with businesses, government agencies, and communities to understand, plan and adapt to the impacts and risks of sea level rise.

Melting Ice, Rising Seas, Shifting Shorelines... the New Reality

This is the story of the century. We have passed a tipping point and are now in a new era – one where the melting of global ice sheets will dramatically transform our world.

John clearly explains the latest science and puts sea level rise into a historical perspective. He then paints a vivid picture of what we can expect in the future, the potential solutions and what we must do now to create resilient cities and communities.

In this enlightening presentation John explains:

- Why sea level rise is now unstoppable
- The realistic projections over the coming decades
- How the triple threat from storms, tides and sea level rise is producing devastating flooding
- Key potential business opportunities that could benefit our economy
- Why real estate values will go "underwater" long before the property does
- Why communities, businesses and individuals must start planning and adapting now

Higher Sea Levels Mean Big Risk and Big Business Opportunities

Businesses need to have the latest information on how sea level rise is going to impact their assets and supply chains in coastal zones around the world. Seeing what lies ahead can reduce risk and identify potential new business opportunities. John highlights the realistic projections that can impact an organization's bottom line, because today the most important line in business is the shoreline.

Rising Seas: Community Planning for a new era

Municipalities in coastal zones and on tidal rivers must now plan for a full range of flooding scenarios from the interplay of storms, tides and sea level rise. John explains how good planning needs to consider short, medium and long range time scales to create cost effective resiliency.

John is available for:

Keynotes	Briefings
Breakout Sessions	Workshops
Panel Discussions	Consultations

John's entertaining, customized presentations allow any audience to easily see the big picture of the coming impacts from rising sea levels on businesses, communities and society.

Testimonials

"I heard John's riveting keynote address at the National Trust for Historic Preservation conference and knew we needed to bring him to Annapolis to share his clear and compelling message with the citizens and decision makers in our historic State capital. His presentation to our diverse audience of municipal leaders, business owners, government staff, media and the public helped everyone understand how we all must begin to plan and adapt to higher sea levels."

Lisa Craig, Chief of Historic Preservation City of Annapolis

"Your presentation, *Rising Seas and Shifting Shorelines*, was captivating and well-received by all attendees; several commented that it was a highlight of the conference. As a result our perceptions, analysis, and decisions about future systems will be better informed."

ADM Paul F. Zukunft, Commandant, U.S. Coast Guard

"IMarEST invited John to give our prestigious Stanley Gray lecture in London. It was one of the best lectures I have attended in my life. His expert advice has helped our members to understand the critical issues and define a way forward to address them. Top class speaker!"

Marcus Jones, Institute of Marine Engineering, Science and Technology

"John Englander presented thought-provoking, science-based information in a way that was very accessible for an audience with a diversity of backgrounds."

Kelly Samek, Florida Bar Association - Environmental and Land Use

"At the 2013 Climate Leadership Conference, John was the highest rated amongst more than 70 speakers!"

Daniel Kreeger, Association of Climate Change Officers

"This excellent presentation and workshop should be given at Planning Departments and City Commissions in every potentially affected municipality in the country."

William Cary

City Of Miami Beach

Previous Keynotes and Briefings (Partial List):

Google - Real Estate Division

Nat'l Trust For Historic Preservation

Port of San Francisco

US Coast Guard

City of Annapolis

US Congress

ULI-Urban Land Institute

NAEM (National Assoc. of Environmental Managers)

US Department of Homeland Security

Miami Dade Sea Level Rise Task Force

Florida Bar Association

Booz Allen Hamilton

His bestselling book, *High Tide On Main Street: Rising Sea Level and the Coming Coastal Crisis*, clearly explains the science behind sea level rise, the impending economic impacts and the "intelligent adaptation" that all businesses and coastal communities must consider today.
